

Qualcomm® RB3 Gen 2 Lite Vision Kit

IoT development kit designed for high-performance compute, accessibility, and flexible and customizable features

The Qualcomm RB3 Gen 2 Lite Vision Kit gives developers a valuable combination of impressive performance and customizable features, including powerful AI processing and computer vision, to easily create a broad range of IoT solutions across use cases such as Robotics, industrial, and automation.

The Qualcomm RB3 Gen 2 Lite is based on the Qualcomm® QCS5430 processor. This processor's scalable performance is designed to deliver superior features and performance across all dimensions of IoT, specifically for Robotics, Industrial Handhelds (IHH), Retail, Cameras, and Drone applications. This includes support for Wi-Fi 6E for ubiquitous coverage, a unified software stack, powerful AI, and expanded interfaces across ecosystems.

The QCS5430 processor was designed with premium features and flexibility to design IoT products. It comes loaded with Wi-Fi 6E for multi-gigabit speeds, seamless connectivity, powerful heterogeneous computing, and edge AI-powered multi-camera support. Select between preset feature packs or customize one according to your product needs today, or wait and easily upgrade OTA (Over the Air) in the future via software to unlock even greater performance.

The platform includes a development kit and software. Developers can select the feature pack that best addresses their needs, and design IoT products that demand advanced performance. The platform includes SDKs that make it easy for developers to use and integrate applications and services. The hardware development kit is also compliant with the 96Boards open hardware specification to support a range of mezzanine-board expansions, beginning with the Vision Mezzanine. The platform includes the Qualcomm Spectra™ ISP 570L image processing engine for the ultimate photography and videography experience, and comes with a main camera and tracking camera on the Vision Kit. It can connect to and process the output of other cameras such as stereo, depth, and Time-of-Flight (ToF). The Qualcomm® Adreno™ 633 VPU provides high-quality, UltraHD video encode and decode, while the Adreno 1075 DPU enables on-device and external UltraHD display support.

Multi-gigabit Wi-Fi 6E achieves blazing-fast wireless connectivity and low latency. Our Wi-Fi 6E offerings utilize advanced features like Qualcomm® 4K Quadrature Amplitude Modulation (QAM) and support for high-speed 160 MHz channels for multi-gigabit-per-second speeds with superb stability and consistent experiences. With the Qualcomm® Kryo™ 670 CPU and a Qualcomm® Hexagon™ processor featuring a fused AI-accelerator architecture, this solution delivers powerful connections and computing performance, and is purpose-built for industrial and commercial IoT applications such as ruggedized handhelds and tablets, human-machine interface systems, point-of-sale systems, drones, kiosks, edge AI boxes, and connected cameras.
